

Commercial Therma Series Insulated Steel Door**Design Change – Addition of Minor Pencil Grooves**

To enhance the appearance of our commercial insulated garage doors we are adding minor pencil grooves (horizontal grooves) to the door face spaced every 4". The steel face will still have a wood grain texture.

As current inventories are depleted the new design will be replacing them. Leading up to this change we have done our best to balance out inventories to ensure a smooth switch over.

The Pencil Groove design will be a standard feature on all Commercial Therma Series doors. (Models 308 and 650).

*Non Pencil Groove sections will be available by special request and for replacement sections for a limited period of time.

**Please feel free to contact your Westgate Door sales representative if you have any further questions.
